DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6713906. The only difference between the two claims is that the patented claim is narrower, it recites specific drive circuits such as operational amplifiers for controlling the two power-supply-side switching elements and the pending claim uses a broader language, it recites two switching device drive circuits for controlling the two switching devices adjacent to the power supply. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Claim Objections

3. Claims 2-11 are objected to as being dependent upon a rejected base claim.

Art Unit: 2837

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited documents teach various systems for controlling DC motors using H-bridge devices.
